Your safety is paramount!

Protect you and your patients

The Plasma Concepts Air Filter is designed to keep your treatment room filtered throughout day. A modern, lightweight, compact design allowing for simplified use & storage.

Since Plasma treatments use energy to cauterize vessels and vaporize tissue, they can create gaseous materials. This Air Filter is designed to combat airborne hazards by removing contaminants. Our unit effectively captures and filters to aid in removal of potentially hazardous particulates and by-products of procedures.

Easy integration and easy to use design with Plasma devices. Compact, quiet and highly effective plume extraction solution!

Place on a shelf, counter, or cart for convenience. Replacement filters can be purchased through plasmaconcepts.com. With its intuitive touch screen, this unit is extremely easy to use.
